INSTRUCTION MANUAL
BEDIENUNGSANLEITUNG
MANUEL D’INSTRUCTIONS

COLOUR CCD camera
CCD-Farbkamera
Caméra CCD COULEUR
彩色CCD摄像机

About this manual
• Before installing and using the camera, please read this manual carefully. Be sure to keep it handy for later reference.
• This manual gives basic connections and operating instructions for 2 PAL models (VCC-4594P, 4592P).

Über diese Bedienungsanleitung
• Lesen Sie bitte vor der Montage und dem Inbetriebnehmen der Kamera zuerst diese Bedienungsanleitung sorgfältig durch und bewahren Sie sie zum späteren Nachschlagen auf.
• In dieser Anleitung finden Sie die Anschlüsse und die Grundbedienung für 2 PAL-Modelle (VCC-4594P und 4592P).

A propos de ce manuel
• Avant d’installer et d’utiliser la caméra, veuillez lire ce manuel attentivement. Gardez-le à portée de main pour toute référence ultérieure.
• Ce manuel couvre les branchements et instructions pour l’utilisation de base pour 2 modèles de format PAL (VCC-4594P et 4592P).

关于本说明书
• 在安装和使用摄像机之前，请仔细阅读本使用说明书，以备今后查阅。
• 本说明书介绍2040PAL机型（VCC-4594P, 4592P）的基本连接方法和操作说明。
Depending on the conditions of use, installation and environment, please be sure to make the appropriate settings and adjustments. If you need help with installation and/or settings, please consult your dealer.

**CONTENTS**

PRECAUTIONS .......................................................... 2
PARTS NAMES .......................................................... 3
CONCERNING AUTO-IRIS LENSES .............................. 5
FLANGE-BACK ADJUSTMENT ...................................... 6
MOUNTING THE LENS .................................................. 7
CONNECTIONS .......................................................... 9
SETTINGS ............................................................... 11
TROUBLESHOOTING .................................................. 17
SPECIFICATIONS ....................................................... 18

**FEATURES**

- The optical filter is switched automatically to colour image or black and white image according to the subject brightness.
- Built-in interline transfer method 1/3" CCD, approx. 410,000 picture elements
- Low smear, anti-blooming, low lag, no burning and no geometric distortion using the CCD solid state image device.
- 100% solid state components giving excellent immunity to shock and vibration
- Not subject to interference from magnetic or electrostatic fields
- High sensitivity, minimum required illumination is 0.03 lux (F1.2) B/W mode
- Horizontal resolution, more than 520 TV lines
- Power supply: 24 V AC operation (VCC-4594P)
  12 V DC operation (VCC-4592P)

**ACCESSORIES**

1. Lens iris plug (4-pin) .............................................. 1 pc.
2. Clamping core A .................................................... 2 pc.
3. Clamping core B .................................................... 3 pc.
PRECAUTIONS

■ In case of problem
Do not use the camera if smoke or a strange odour comes from the unit, or if it seems not to function correctly. Disconnect the power cord immediately, and consult your dealer (or a Sanyo Authorized Service Centre).

■ Do not open or modify
Do not open the cabinet, as it may be dangerous and cause damage to the unit. For internal settings and repairs, consult your dealer (or a Sanyo Authorized Service Centre).

■ Do not put objects inside the unit
Make sure that no metal objects or flammable substance get inside the camera. If used with a foreign object inside, it could cause a fire, short-circuits or damages.
If water or a liquid gets inside the camera, disconnect the power cord immediately, and consult your dealer (or a Sanyo Authorized Service Centre). Be careful to protect the camera from rain, sea water, etc.

■ Be careful when handling the unit
To prevent damages, do not drop the camera or subject it to strong shock or vibration.

■ Install away from electric or magnetic fields
If installed close to a TV, radio transmitter, magnet, electric motor, transformer, audio speakers the magnetic field they generate will distort the image.

■ Protect from humidity and dust
To prevent damages to the camera, do not install it where there is greasy smoke or steam, where the dampness may get too high, or where there is a lot of dust.

■ Protect from high temperatures
Do not install close to stoves, or other heat generating devices, such as spotlights, etc., or where it could be subject to direct sunlight, as that could cause deformation, discoloration or other damages.
Be careful when installing close to the ceiling, in a kitchen or boiler room, as the temperature may raise to high levels.
Install where the temperature range will stay between –10˚C and 50˚C.
(no condensation)

■ Cleaning
• Dirt can be removed from the cabinet by wiping it with a soft cloth. To remove stains, wipe with a soft cloth moistened with a soft detergent solution and wrung dry, then wipe dry with dry soft cloth.
• Do not use benzine, thinner or other chemical product on the cabinet, as that may cause deformation and paint peeling. Before using a chemical cloth, make sure to read all accompanying instructions. Make sure that no plastic or rubber material comes in contact with the cabinet for a long period of time, as that may cause damage or paint peeling.
PARTS NAMES

1. Power indicator (POWER)
   Comes on when the power to the camera is on.

2. Video output connector (VIDEO OUT: BNC type)
   Connect this connector to a device such as a VCR or monitor with a VIDEO IN connector.

3. Manual colour/black and white setting terminal (CONTROL)
   • G (ground) terminal
   • C (colour) terminal
   • B (black and white) terminal

4. External sync composite video signal input connector (VBS IN: BNC type)
   Connect to this connector the synchronizing signal output from a synchronizing signal device or the composite signal of a video distributor.

5. Line phase adjustment volume (LINE PHASE) (VCC-4594P only)
   When using two cameras or more, the image on the monitor may roll vertically when switching sources. This rolling can be minimized by turning this volume.

6. Power input terminal
   • VCC-4594P: 24 V AC input terminal (24 V AC, GND)
   • VCC-4592P: 12 V DC input terminal (12 V DC, NC, +, –)

7. Camera setup section (under the cover)
   If due to installation conditions or environment the settings may need to be modified for best results (see "SETTINGS").
   To access the controls, loosen the cover fixing screw A, then remove the cover.

8. Lens iris output connector (LENS)
PARTS NAMES

③ Flange-back lock screw
④ Lens mount cap
The cap is installed to protect the lens mount section.
Remove the lens mount cap before installing a lens (sold separately).
⑤ Flange-back adjustment lever (See page 6)
⑥ Camera installation bracket
The bracket can be fixed at the top or bottom of the camera. When fixing the bracket, be sure to use the longer screws and install the shorter screws on the opposite side to seal the openings.
① Shorter screws: M3 x 4
② Longer screws: M3 x 6
③ Camera mounting screw hole: 1/4"-20 UNC

CAUTION:
When installing the camera support, select a location that can support the total weight of the camera and accessories.
CONCERNING AUTO-IRIS LENSES

- **DC type auto-iris lens**
  A lens without amplifier circuit that operates only on a DC power source. In general, this type of lens is referred to as DC type coil lens or DC type non-amplifier lens.
  (Set the A.I. LENS switch to the DC position.)

- **VIDEO type auto-iris lens**
  A lens with amplifier circuit that operates on video signal and DC power source. In general, this type of lens is referred to as EE amplifier type lens.
  ALC and LEVEL volume level controls are available on the lens for iris adjustments.
  (Set the A.I. LENS switch to the VIDEO position.)

### Compatible auto-iris lenses

<table>
<thead>
<tr>
<th>1/3 inch Sanyo DC type lens</th>
<th>VIDEO type lens</th>
</tr>
</thead>
<tbody>
<tr>
<td>VCL-CS8LY: Standard angle, f= 8 mm</td>
<td>Standard angle, f= 9 mm</td>
</tr>
<tr>
<td>VCL-CS4LY: Wide angle, f= 4 mm</td>
<td>Telephoto angle, f= 12 mm</td>
</tr>
<tr>
<td>VCL-CS2LY: Ultra-wide angle, f= 2.8 mm</td>
<td>More telephoto angle, f= 16 mm</td>
</tr>
</tbody>
</table>

- **If using a VIDEO type auto-iris lens**
  - Set the ALC and LEVEL controls on the lens to adjust the iris. Normally the ALC volume should be turned all the way to Av (Average).
  - Depending on the type of lens used, the lens may not perform properly. In such a case, adjust the LEVEL volume on the lens casing to correct.
If the pick-up surface is not correctly positioned with relation to the lens focal point, the picture will be out of focus (in particular when using auto-iris power zoom lenses, sold separately). If that is the case, adjust the flange-back position as described below.

1. Using a + screwdriver, loosen the flange-back lock screw (M2:+).
2. Set the zoom lens to the maximum telephoto position, set the focus using the focus ring on the lens.
3. Set the zoom lens to the maximum wide angle position, set the focus using the flange-back adjustment lever.
4. Repeat steps 2 and 3, until the image stays in focus when changing from a telephoto shot to a wide angle shot.

When the setting is complete, tighten the flange-back lock screw.

Note:
When flange-back lock screw is completely tighten it will protrude slightly as shown in the illustration (Fig. 1). Do not tighten the screw further.
MOUNTING THE LENS

Please use a DC type auto-iris lens (sold separately).

Checking the lens mount
Do not use a lens if length "L" is more than 5 mm. If not, that may damage the camera and prevent proper installation.

1. Remove the lens mount cap from the camera.
2. Install the auto-iris lens.
   CS mount type lens
   Carefully align the lens mount with the camera opening, then turn the lens slowly to install it.
   C mount type lens
   To allow for flange-back adjustment, install the C-mount adaptor (option) on the lens mount, then carefully align the lens mount with the camera opening and turn the lens slowly to install it.
3. Connect the lens plug to the lens iris output connector (LENS) on the side of the camera.
   When using lenses from other makers, the plug shape may not correspond to the terminal on the camera. In such a case, remove the original plug and using a soldering iron, connect the supplied lens iris plug according to the diagram. (Refer to page 8.)
   NOTE: When using an auto-iris lens, the supplied clamping core (B) must be installed on the lens wire, in order to prevent electromagnetic interference to the other devices connected.
MOUNTING THE LENS

Rewiring the lens cable in the lens iris plug

1. Prepare the lens cable.
   Cut the cable at the plug, then remove approx. 8 mm of the cable sheath and strip about 2 mm from each wire.

2. Install the lens iris plug.
   Solder the cable to the pins following the correct pin layout (refer to the table and illustrations), then close the plug cover.

Pin layout

CONNECTIONS

(VCC-4594P only)

Basic connection for monitoring or recording

The peripheral devices (VCR, monitor, lens, etc.) and cables are sold separately.

1 Make the video signal connection between the camera and the monitor or time lapse VCR.

2 Connect to 24 V AC UL class 2 power supply (sold separately).

CAUTION:

• To prevent camera and/or power supply failure, pay close attention to polarity when making the connections.
• To prevent fire hazard any UL listed wire rated VW-1, should be used for the 24 V AC cable input terminal.

2A: When using this unit, the supplied clamping core (A or B) must be installed on the power cord and BNC cable, in order to prevent electromagnetic interference to the other devices connected.

3 Insert the plug of this power cord into a wall outlet.

The POWER indicator (A) will light. Adjust the picture on the monitor using the Brightness and Contrast controls.

Coaxial cable type and maximum length

• Cable type RG-59U (3C-2V), 250 m maximum.
• Cable type RG-6U (5C-2V), 500 m maximum.
• Cable type RG-11U (7C-2V), 600 m maximum.

CAUTION:

• The RG-59U type cable should not be run through electrical conduits or through the air.
• Using CCTV/Video-grade coaxial cable.
CONNECTIONS

(VCC-4592P only)

Basic connection for monitoring or recording

The peripheral devices (VCR, monitor, lens, etc.) and cables are sold separately.

1. Make the video signal connection between the camera and the monitor or time lapse VCR.

2. Use a commercially available 12 V DC adaptor.
   Connect an DC 12 V power source to the 12 V DC input terminal on the back of the camera.

2A: When using this unit, the supplied clamping core (A or B) must be installed on the power cord and BNC cable, in order to prevent electromagnetic interference to the other devices connected.

3. The POWER indicator (A) will light. Adjust the picture on the monitor using the Brightness and Contrast controls.

Coaxial cable type and maximum length

- Cable type RG-59U (3C-2V), 250 m maximum.
- Cable type RG-6U (5C-2V), 500 m maximum.
- Cable type RG-11U (7C-2V), 600 m maximum.

CAUTION:

- The RG-59U type cable should not be run through electrical conduits or through the air.
- Using CCTV/Video-grade coaxial cable.
The illustration shows the factory default settings for the switches in the camera setup section. The camera settings are described on the assumption that a DC type auto iris lens is being used. If you are using a VIDEO type auto iris lens, be sure to read the Note which is given. Furthermore, refer to the sticker on the inside of the cover for details on DIP switch positions.

SETTINGS

**High speed electronic shutter setting**

Normally, the speed setting switches for the high speed electronic shutter are all set to the down (OFF) position. This sets the electronic shutter speed to 1/50 sec. The switches can be set as indicated in table A to select one of the 8 speeds available.

**CAUTION:**
- When using the high speed electronic shutter, the switch 4 must be set to the down (AI) position.
- Using the high speed electronic shutter indoors with low lighting, will give darker pictures. In such a case, add some lights to make sure the lighting is sufficient. If the lighting is very bright, pay attention to the light angle in order to avoid or minimize the smear phenomenon effect.

(Unit: sec.)

**Iris function setting**

This should normally be set to the down (AI) position. Use a manual or fixed iris lens and set the lens aperture to the shortest F stop. Set the switch 4 (IRIS) to the up (EI) position.

- When using an auto-iris lens (for indoor/outdoor use)
  Set the switch 4 (IRIS) to the down (AI) position.

**Note:**
- The electronic iris is suitable for normal indoor use. When the switch 4 (IRIS) is set to the up (EI) position, do not use an auto-iris lens.
- If used under fluorescent light, the image may flicker. In such a case, change to incandescent lighting or set the switch 4 (IRIS) to the down (AI) position and use an auto-iris lens.
- When shooting bright subjects, pay attention to the light angle in order to avoid or minimize the smear phenomenon effect.
- If conditions are outside the electronic iris operation range or more than the maximum illumination, it will cause saturation of the CCD. In that case, use a manual iris lens.

**Aperture**

The initial setting for switch 5 is up (SHRP) so that the contours of the object are emphasized. However, if the contours of the object are already emphasized more than required, set switch 5 to the down (NOR) position.
SETTINGS

Backlight compensation setting

This camera has two different backlight compensation functions: Normally backlight compensation switch 6 (MULT) and 7 (CENT) are set to the down (OFF) position. Change the backlight compensation switch settings depending on the conditions.

• MULT mode: Use this position when applying backlight compensation to the whole of the screen.
• CENT mode: Use this position when applying backlight compensation to only the central portion of the screen.

Note:
• If switches 6 and 7 are set to the up (ON) position at the same time, the MULT setting will have priority.
• When MULT mode is set, scenes with no backlighting may appear extremely dark and the object may appear over-exposed. If this happens, set to CENT mode.

If using a VIDEO type auto-iris lens
• The ALC volume on the lens should be turned all the way to Av (Average).
• If the backlight compensation function does not compensate properly for the conditions, set using the LEVEL volume on the lens.
SETTINGS

- **White balance adjustment**
  Normally the switch 8 (WB) is set to the down (ATW: auto white balance) position and the white balance is adjusted automatically. If a manual white balance adjustment is necessary, follow the steps below.
  Set the switch 8 (WB) to the up (M: manual) position, then adjust the colour.
  - Turn RED (VR302) to set the red ratio and/or BLUE (VR303) to set the blue ratio.

- **Line phase adjustment (VCC- 4594P only)**
  When using a camera switcher to connect 2 cameras or more to one monitor, there may be a vertical roll of the images when switched. In such a case, set as described below.
  1. Set the switch 9 (SYNC) to the up (LL) position.
  2. Switch the display on the monitor from camera 1 to camera 2.
  Adjust the LINE PHASE volume on camera 2 until the vertical roll of the image stops.
  If more than two cameras are used, please repeat this procedure for all the cameras.

  **CAUTION:**
  If the vertical roll cannot be corrected by setting the LINE PHASE volume on camera 2, try setting the LINE PHASE volume on camera 1. If it still cannot be corrected, please check that the polarity of the power cords of all connected devices is correct.
SETTINGS

External sync adjustment (VBS) (VCC-4592P only)

1. Connect the VBS signal output for the other camera to the VBS IN connector at the rear of this camera.

2. If the signals are not synchronized, change the sub-carrier (SC-P1) switches as follows.

<table>
<thead>
<tr>
<th>Setting</th>
<th>9-pin</th>
<th>10-pin</th>
</tr>
</thead>
<tbody>
<tr>
<td>Default</td>
<td>OFF (down)</td>
<td>OFF</td>
</tr>
<tr>
<td>Set to 90° counterclockwise</td>
<td>OFF</td>
<td>ON (up)</td>
</tr>
<tr>
<td>Set to 180° counterclockwise</td>
<td>ON</td>
<td>OFF</td>
</tr>
<tr>
<td>Set to 270° counterclockwise</td>
<td>ON</td>
<td>ON</td>
</tr>
</tbody>
</table>

Note:
- The sub-carrier switches let you make broad adjustments to the sub-carrier phase. If finer adjustments are required, contact the place of purchase.
- The type and length of the cable which is connected to the VBS connector may cause the horizontal synchronization being out of phase. If this happens, adjust VR304 (H-P: horizontal sync).

Lens iris adjustment

If using a DC type auto-iris lens, you will need to set the LEVEL (VR301) volume when shooting in the conditions described below.

- L (counterclockwise): To decrease the contrast
- H (clockwise): To increase the contrast
  - If shooting simultaneously in a dark room and through a bright window.
  - If the subject background is extremely bright or dark.
  - If the brightness of the picture on the monitor is not correct.
**SETTINGS**

### C • B/W (colour/black and white) switch setting

This switch lets you select the timing of the automatic switching of the optical filter to colour image or black and white image, according to the subject brightness. The default setting is "L". Set the switch according to the brightness.

- **H**: for a brighter setting than L
- **L**: Standard setting

**Notes:**
- After the power has been turned off, switching will restart from colour, when the power is restored.
- A sound may be heard when the colour image or black and white image is switched. Also, the image will be distorted as shown in Fig. 2, this is normal and does not indicate a problem.
- When using infrared lighting, if there is a strong reflection on the subject, the optical filter may switch from black and white to colour mode. Use only enough infrared lighting so that the mode is not switched.
- The focus setting may be different in black and white mode and colour mode. Please check the focus setting in both modes.

### Manual colour/black and white setting

Connect each pin of the CONTROL terminal as indicated below, to set the image to black and white or colour as desired.

- **Colour image setting**
  - Connect the C (colour) and the G (ground) pins.
- **Black and white setting**
  - Connect the B (black and white) and the G (ground) pins.

<table>
<thead>
<tr>
<th>CONTROL terminal</th>
<th>Image</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Auto</td>
</tr>
<tr>
<td>OFF</td>
<td>Black and white</td>
</tr>
<tr>
<td>ON</td>
<td>colour</td>
</tr>
<tr>
<td>ON</td>
<td>Auto</td>
</tr>
</tbody>
</table>

**Notes:**
- The maximum length of cable for CONTROL terminal is 600 m (AWG 24).
- During optical filter switching, even if the manual switching operation is done, you cannot determine if the image is black and white or colour. Manual switching will have to be done one more time.
TROUBLESHOOTING

Before taking the camera for repairs, please check below to make sure that the camera is used correctly. If it still does not perform correctly, please consult your dealer or a Sanyo Authorized Service Centre.

■ No picture on the monitor screen
  • Is the power turned on to all connected devices? Is the voltage correct?
  • Are all the signal connecting cables correctly connected?
  • Is the lighting sufficient?
  • Has the lens cap been removed?
  • Is the lens type (DC or VIDEO) correctly selected?
    Depending on the type of lens, the A. I. LENS switch must be set accordingly.
  • Is the iris control correctly set?
    A: When using a DC type lens, the LEVEL volume (inside the camera casing) should be adjusted.
    B: When using a VIDEO type lens, the LEVEL volume (on the lens) should be adjusted.

■ The picture is not clear
  • Is the monitor correctly adjusted?
  • Is the flange-back position correctly set?
  • Is the lens focus correctly adjusted?
  • Are the lens surfaces clean?
    If there is dust or finger prints on the lens, the image quality will deteriorate. To clean the lens use a soft cloth or a commercially available lens cleaning set.

SERVICE

This camera is a precision instruments and if treated with care, will provide years of satisfactory performance. However, in the event of a problem, the owner is advised not to attempt to make repairs or open the cabinet. Servicing should always be referred to your dealer or Sanyo Authorized Service Centre.

English 17
## SPECIFICATIONS

### Camera:
- **Scanning system**: PAL standard (625 TV lines, 25 frames/sec.)
- **Interlace**: PLL 2:1 interlace
- **Image device**: 1/3 inch solid state image device CCD
- **Picture elements**: 795 (H) x 596 (V)
- **Effective picture elements**: 752 (H) x 582 (V)
- **Synchronizing system**: Internal sync, External sync, Line lock (VCC-4594P only)
- **Resolution**: 520 TV lines horizontally, 400 TV lines vertically
- **Video output level**: 1.0 Vp-p/75 ohms, composite
- **Video S/N ratio**: More than 48 dB
- **Minimum required illumination**:
  - (incandescent lighting): Approx. 0.03 lux with a F 1.2 lens (B/W mode), Approx. 0.6 lux with a F 1.2 lens (colour mode)
- **Control terminal**: Manual colour/black and white setting
- **Backlight compensation**: Manual MULT/CENT switching (Active when using an auto iris lens)
- **Iris function**: Manual EI/AI switching
- **Electronic iris range**: 0.6 lux to 35,000 lux (F 1.2, lens: colour mode), 1.0 lux to 50,000 lux (F 1.4, lens: colour mode)
- **Electronic shutter**: 8 speeds, selectable by switches: (1/50, 1/120, 1/250, 1/500, 1/1000, 1/2000, 1/4000, 1/10000 sec.)
- **Flange-back**: 12.5 mm ± 0.5 mm
- **White balance**: ATW/Manual switching
- **Lens mount**: CS mount

### Environmental conditions:
- **Temperature**: –10°C ~ +50°C
- **Humidity**: less than 90% (no condensation)
- **Power supply**:
  - 24 V AC, 50 Hz (VCC-4594P)
  - 12 V DC (VCC-4592P)
- **Power consumption**:
  - VCC-4594P: 4.1 W (with auto iris lens), 3.2 W (without auto iris lens)
  - VCC-4592P: 3.3 W (with auto iris lens), 2.6 W (without auto iris lens)
- **Weight**: Approx. 450 g (without lens)
